Professional Summary

Site Reliability Engineer with 4+ years of experience across production reliability, cloud operations and application performance for enterprise clients. Skilled in incident management, RCA and proactive alert design, with hands-on Linux, AWS, Kubernetes, Python, Bash and observability platforms including New Relic, Prometheus, Grafana, Dynatrace and Splunk. Combines automation with clear cross-team communication to turn production issues into lasting fixes.

Professional Experience

Site Reliability Engineer - Kissht | September 2025 – Present

- Reduced mean time to detect **(MTTD) by 60%** by implementing proactive alerting with New Relic, Prometheus and Grafana, replacing manual checks with threshold-based detection and enabling faster incident resolution.
- Designed New Relic alert workflows for error rates, response time, zero throughput and API-level error spikes using AWS Lambda, API Gateway and EventBridge, with Slack notifications in **1–5 minutes** across **150+ services**.
- Automated log analysis with Python and tuned Sentry ingestion, reducing troubleshooting effort by **70%** while lowering alert noise.
- Integrated Claude (LLM) with New Relic, Grafana and Sentry to accelerate root cause analysis during incident triage.
- Implemented distributed tracing and synthetic monitoring for proactive failure detection.
- Coordinated **200+ feature releases**, migrations and bug-fix deployments end to end, validating service health before and after each change and keeping engineering and support teams informed.
- Analyzed user journeys through Metabase, Percept and Clarity session recordings to catch post-release regressions.
- Led structured RCAs documented findings and implemented preventive remediation playbooks aligned with SLA/SLO targets, executed instance refreshes with post-change validation.

Cloud Engineer | HCLTech (Client: State Street Corporation) | December 2021 – September 2025

- Managed L2/L3 operations across **30,000+ servers**, maintaining **99.9% uptime** and resolving **250+ incidents per month** within SLA.
- Maintained Java/WebSphere applications across production, UAT and development, partnering with developers to shorten release-resolution time by **15%**.
- Diagnosed production issues using Log4j and Apache HTTP Server logs, heap and thread dumps and Dynatrace distributed traces.
- Reduced repeated incidents by **30%** by diagnosing recurring Harness CI/CD pipeline failures and implementing permanent automation.
- Supported migration of enterprise applications from on-premises to AWS through phased cutover planning and validation, achieving **zero downtime**.
- Developed Python and Bash automation for patching, health checks and reporting, reducing manual workload by **40%**.
- Supported Docker and Kubernetes deployments, accelerating deployment cycles by **25%**.

Key Achievements

- **Delivered** 10% cost savings through private-cloud resource optimization and idle-resource cleanup.
- Recognized as **Performer of the Month (Jan 2025)** at **HCLTech** for contributions to reliability and automation.

Projects

New Relic Error Rate Alerting | *New Relic, NRQL, AWS Lambda, API Gateway, Slack*

- Built a serverless workflow sending incident-opened/resolved Slack alerts with affected-service details and IST timestamps within **1–5 minutes**, minimizing manual dashboard checks.

New Relic Response-Time Alerting | *New Relic APM, GraphQL/NerdGraph, API Gateway, Slack*

- Developed APM latency alerts enriched through the **New Relic** GraphQL API, with chart visualizations and quiet-hours logic to aid investigation and limit unnecessary pages.

Zero-Throughput Alerting | *New Relic NerdGraph/NRQL, EventBridge, Python, Slack*

- Implemented zero-throughput detection for critical services and APIs, including P1–P4 policy mute/unmute automation. Project documentation estimates **70–80%** less manual effort for release and outage checks.

API-Level Error-Spike Detection | *New Relic NerdGraph/NRQL, EventBridge, AWS Lambda, Python, Slack*

- Built scheduled API error-spike checks comparing the previous 60 minutes with the same hour yesterday and last week; included a 2x threshold, minimum-error guard, critical/resolved messages and duplicate suppression.

Automated DAG Health Notifications | *Google Apps Script, Gmail, Slack Webhooks*

- Parsed DAG summary emails every 15 minutes, classified success, failure and anomalies, and sent Slack updates with duplicate protection, execution locking and bounded retry delays.

Certifications

- AWS Certified SysOps Administrator – Associate
- Oracle Cloud Infrastructure 2024 Certified Foundations Associate
- Associate Cloud Engineer
- Professional Cloud DevOps Engineer Certification
- Professional Cloud Security Engineer Certification

Education

- Bachelor of Technology, Computer Science (CSE) | Dr. A.P.J. Abdul Kalam Technical University, Lucknow | 2020 | Honors.

Skills

Reliability Operations: Incident and major incident management, on-call response, L2/L3 operations, RCA, problem management, release/change validation, SLA/SLO/SLI tracking, instance refresh and post-change validation

Cloud & Systems: AWS (EC2, S3, IAM, Lambda, **API Gateway**, **EventBridge**, ALB, ECS), GCP, Azure, private cloud, Linux (RHEL/Oracle Linux/Ubuntu), load balancing, virtual machines

Observability: New Relic APM, NRQL, GraphQL/Nerd Graph, **Prometheus**, **Grafana**, Dynatrace, **Splunk**, ELK Stack, Sentry, distributed tracing, synthetic checks and alert engineering

Containers & CI/CD: Docker, **Kubernetes**, Jenkins, GitHub Actions, Harness, Git, GitHub, CI/CD pipelines

Programming & Automation: Python, Bash, Java, SQL, Google Apps Script, serverless workflows, log analysis and operational automation

Application Technologies: Java/WebSphere, Apache HTTP Server, Log4j, JVM diagnostics, application/server log analysis, MySQL, MSSQL

Security & Infrastructure: IAM, patch management, vulnerability remediation, OS/application hardening.

AI-assisted Operations: Claude (LLM)-assisted RCA and incident triage.
